General Permit for the Discharge of Stormwater from Separate Municipal Storm Sewer Systems

2018 Annual Report

Prepared For:

Town of Monroe

March 4, 2019
Part I: Summary of Minimum Control Measure Activities

1. Public Education and Outreach
MS4 General Permit Section 6(a)(1) / page 19, requires the Town to “implement a public education program to distribute educational materials to the permittee’s community or conduct equivalent outreach activities about the sources and impacts of stormwater discharges on waterbodies and the steps that the public can take to reduce pollutants in stormwater runoff.”

1.1 BMP Summary

**1.3b: Add Bacteria and Pet Waste Educational Material to Website:**
The Town is working with its MS4 Consultant to procure appropriate educational materials related to pet waste and bacteria by the end of Year 1 of the effective General Permit. Once material is selected, it will be posted to the Town website.

**Projected:**
06/30/18

**1.3c: Add Nitrogen and Phosphorus Management Educational Material to Website:**
The Town will add an electronic copy of its “Clean Water Begins with You: Nutrient Management for a Healthier Lawn and Environment” brochure to its stormwater resources page on the Town website.

**Projected:**
06/30/2019

---

### 1.2 Describe any Public Education and Outreach activities planned for the next year, if applicable.

Projected activities for 2019:

1. Procure educational materials on mercury and post 50 copies of these materials in the Land Use Office at Town Hall.
2. Add the material procured in Item 1 above to the Town website.
3. Continue to use display board in Town Hall, and at Town-sponsored events.
4. Continue announcements on WMNR, and broadcast four announcements.
5. Refresh content on Town stormwater website as needed.

1.3 Details of activities implemented to educate the community on stormwater

<table>

</tr>
</thead>
<tbody>
<tr>
<td>3.6 Address IDDE in areas with pollutants of concern</td>
<td>In progress</td>
<td><strong>3.6 Address IDDE in areas with pollutants of concern.</strong> The Town’s Written IDDE plan includes wet weather sampling within areas of impaired waters.</td>
<td>Identify priority locations for IDDE program based on stormwater pollutants of concern. Tailor IDDE program to prioritize these locations and implement the program. Update Annual Report with information on the prioritized areas, actions taken by the Town to address these areas, and the anticipated pollutant reduction.</td>
<td>Town Engineer</td>
<td>Not specified</td>
<td>Projected: Initial screening complete by 06/30/20</td>
<td></td>
</tr>
</tbody>
</table>

**3.2 Describe any IDDE activities planned for the next year, if applicable.**

The Town plans the following activities for 2019:

1. Continue to build out its storm sewer mapping
2. Continue to utilize the Q-Alert system for citizen complaints.
3. Enforce the IDDE ordinance as necessary.
4. Continue implementation of written IDDE program.
3.3 List of citizen reports of suspected illicit discharges received during this reporting period.

<table>
<thead>
<tr>
<th>Date of Report</th>
<th>Location / suspected source</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3.4 Provide a record of illicit discharges occurring during the reporting period and SSOs occurring July 2012 through end of reporting period using the following table.

<table>
<thead>
<tr>
<th>Location (Lat long/ street crossing /address and receiving water)</th>
<th>Date and duration of occurrence</th>
<th>Discharge to MS4 or surface water</th>
<th>Estimated volume discharged</th>
<th>Known or suspected cause / Responsible party</th>
<th>Corrective measures planned and completed (include dates)</th>
<th>Sampling data (if applicable)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO reported illicit discharges</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NO reported sanitary sewer overflows</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(No sanitary sewers in Monroe)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3.5 Briefly describe the method used to track illicit discharge reports, responses to those reports, and who was responsible for tracking this information.

Illicit discharge reports are tracked using the Town’s Q-Alert system, with the Director of Public Works being the primary person responsible for tracking the information and follow-up results.

---
3.6 Provide a summary of actions taken to address septic failures using the table below.

<table>
<thead>
<tr>
<th>Location and nature of structure with failing septic systems</th>
<th>Actions taken to respond to and address the failures</th>
<th>Impacted waterbody or watershed, if known</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The Monroe Health Department issues on average 75 septic permits each year to repair or replace onsite sewage disposal systems. The Health Department works with property owners and septic installers to resolve septic issues in a timely fashion.</td>
<td></td>
</tr>
</tbody>
</table>

3.7 IDDE reporting metrics

<table>
<thead>
<tr>
<th>Metrics</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Estimated or actual number of MS4 outfalls</td>
<td>450</td>
</tr>
<tr>
<td>Estimated or actual number of interconnections</td>
<td>(unknown)</td>
</tr>
<tr>
<td>Outfall mapping complete</td>
<td>70%</td>
</tr>
<tr>
<td>Interconnection mapping complete</td>
<td>70%</td>
</tr>
<tr>
<td>System-wide mapping complete (detailed MS4 infrastructure)</td>
<td>70%</td>
</tr>
<tr>
<td>Outfall assessment and priority ranking</td>
<td>100%</td>
</tr>
<tr>
<td>Dry weather screening of all High and Low priority outfalls complete</td>
<td>0%</td>
</tr>
<tr>
<td>Catchment investigations complete</td>
<td>0 %</td>
</tr>
<tr>
<td>Estimated percentage of MS4 catchment area investigated</td>
<td>0%</td>
</tr>
</tbody>
</table>

3.8 Briefly describe the IDDE training for employees involved in carrying out IDDE tasks including what type of training is provided and how often is it given (minimum once per year).
Annual training is incorporated with the Town’s Highway garage staff, who are trained to identify signs of potential illicit discharges, especially in the course to cleaning or replacing catch basins. The Town sanitarian is also trained.
4. Construction Site Runoff Control *(Section 6(a)(4) / page 25)*

</tbody>
</table>
4.2 Describe any Construction Site Runoff Control activities planned for the next year, if applicable.

The following activities are planned for 2019:

1. Identification of locations where Monroe’s MS4 discharges into a neighboring MS4, and develop agreements as appropriate.
2. Continue the following practices:
   a. Notification of applicants of their potential obligation to register under the Construction General Permit.
   b. Utilize the Q-Alert system for citizen feedback on land disturbance activities.
   c. Site inspections.
   d. Site review.
   e. Implementation of interdepartmental Pre-Construction meeting.
## 5. Post-construction Stormwater Management (Section 6(a)(5) / page 27)

5.2 Describe any Post-Construction Stormwater Management activities planned for the next year, if applicable.

The following activities are proposed for 2019:

1. Continue to enforce LID site development practices
2. Identify public and private retention/detention ponds in priority areas.
3. Prepare draft condition allowing town access to new detention/retention ponds. Continue requirements for access easements in subdivisions.
4. Address post-construction sediment and erosion control issues as they occur.
5. Continue to encourage preservation and enhancement of natural buffers.
7. Continue to coordinate application reviews with the local Health Department.

6.13 Parks and Open Space Management Ongoing

**6.13 Parks and Open Space Management.** The Town optimizes fertilizer use on its parks properties, and used 65 bags on the upper fields at Great Hollow. Grass clippings are left in place, and leaves are collected and composted.

Pesticide use is limited to select application for grub control.

Continue implementing procedures for fertilizer application and disposal of grass clippings and leaves for lands that are the legal responsibility of the Town.

Director of Parks and Recreation 12/31/18 Completed: 12/31/18

6.14 Pet Waste Management Ongoing

**6.14 Pet Waste Management.** The Town has a policy of not allowing dogs in its parks.

On the Pequonnock River bike path, there are containers for pet waste disposal, which are emptied by a private trash hauler.

Identify locations with the town where pet waste threatens receiving water quality.

Director of Parks and Recreation 12/31/18 Completed: 12/31/18

### 6.4 Catch basin cleaning program

Briefly describe the method used to optimize your catch basin inspection and cleaning schedule. [Complete this section for the 2017 Annual Report only]

The Town has swept their streets and parking lots for a number of years, and based upon this experience, are well aware of the locations where additional cleaning is necessary, typically adjacent to heavily trafficked areas and at roadway low points.
6.5 Retrofit program

Briefly describe the Retrofit Program identification and prioritization process, the projects selected for implementation, the rationale for the selection of those projects and the total DCIA to be disconnected upon completion of each project. [Provide information if available in 2017 report. Section to be completed for the 2019 Annual Report.]

Projects are identified on an as-needed basis, and implemented based upon perceived benefit or potential impact to water quality. In 2018, no projects were undertaken to improve storm drainage quality.

Describe plans for continuing the Retrofit program and how to achieve a goal of 1% DCIA disconnection in future years. [Provide information if available in 2017 report. Section to be completed for the 2019 Annual Report.]

The retrofit program will continue to proceed on an as-needed basis, as funding is made available. The Town is evaluating its properties to identify potential disconnection opportunities, and looks for disconnection opportunities in site plan applications by default since the Town requires conformance with the 2011 LID Supplement to the 2004 Stormwater Quality Manual.

Describe plans for continuing the Retrofit program beyond this permit term with the goal to disconnect 1% DCIA annually over the next 5 years. [Provide information if available in 2017 report. Section to be completed for the 2019 Annual Report.]

The Town will continue with its existing process for implementing its own projects, and also for reviewing Town projects and site applications as they come in for review to help achieve the DCIA reduction goal.
Part II: Impaired waters investigation and monitoring [This section required beginning with 2019 Annual Report]

1. Impaired waters investigation and monitoring program

1.1 Indicate which stormwater pollutant(s) of concern occur(s) in your municipality or institution. This data is available on the MS4 map viewer: [http://s.uconn.edu/ctms4map](http://s.uconn.edu/ctms4map).

- Nitrogen/Phosphorus
- Bacteria
- Mercury
- Other Pollutant of Concern

1.2 Describe program status

Discuss 1) the status of monitoring work completed, 2) a summary of the results and any notable findings, and 3) any changes to the Stormwater Management Plan based on monitoring results.

---

2. Screening data for outfalls to impaired waterbodies (Section 6(i)(1) / page 41)

2.1 Screening data collected under 2017 permit

Complete the table below for any outfalls screened during the reporting period. Each Annual Report will add on to the previous year’s screening data showing a cumulative list of outfall screening data.

<table>
<thead>
<tr>
<th>Outfall ID</th>
<th>Sample date</th>
<th>Parameter (Nitrogen, Phosphorus, Bacteria, or Other pollutant of concern)</th>
<th>Results</th>
<th>Name of Laboratory (if used)</th>
<th>Follow-up required?</th>
</tr>
</thead>
<tbody>

Part III: Additional IDDE Program Data [This section required beginning with 2019 Annual Report]

1. Assessment and Priority Ranking of Catchments data (Appendix B (A)(7)(c) / page 5)

Provide a list of all catchments with ranking results (DEEP basins may be used instead of manual catchment delineations).

<table>
<thead>
<tr>
<th>1. Catchment ID (DEEP Basin ID)</th>
<th>2. Category</th>
<th>3. Rank</th>
</tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Outfall and Interconnection Screening and Sampling data (Appendix B (A)(7)(d) / page 7)

2.1 Dry weather screening and sampling data from outfalls and interconnections

Provide sample data for outfalls where flow is observed. Only include Pollutant of concern data for outfalls that discharge into stormwater impaired waterbodies.

<table>
<thead>
<tr>
<th>Outfall / Interconnection ID</th>
<th>Screening / sample date</th>
<th>Ammonia</th>
<th>Chlorine</th>
<th>Conductivity</th>
<th>Salinity</th>
<th>E. coli or enterococcus</th>
<th>Surfactants</th>
<th>Water Temp</th>
<th>Pollutant of concern</th>
<th>If required, follow-up actions taken</th>
</tr>

<th>Water Temp</th>
<th>Pollutant of concern</th>
</tr>
</thead>
</table>

3. Catchment Investigation data (Appendix B (A)(7)(e) / page 9)

3.1 System Vulnerability Factor Summary

For those catchments being investigated for illicit discharges (i.e. categorized as high priority, low priority, or problem) document the presence or absence of System Vulnerability Factors (SVF). If present, report which SVF’s were identified. An example is provided below.

<table>
<thead>
<tr>
<th>Outfall ID</th>
<th>Receiving Water</th>
<th>System Vulnerability Factors</th>
</tr>
</thead>
</table>

Where SVFs are:

1. History of SSOs, including, but not limited to, those resulting from wet weather, high water table, or fat/oil/grease blockages.
2. Sewer pump/lift stations, siphons, or known sanitary sewer restrictions where power/equipment failures or blockages could readily result in SSOs.
3. Inadequate sanitary sewer level of service (LOS) resulting in regular surcharging, customer back-ups, or frequent customer complaints.
4. Common or twin-invert manholes serving storm and sanitary sewer alignments.
5. Common trench construction serving both storm and sanitary sewer alignments.
6. Crossings of storm and sanitary sewer alignments.
7. Sanitary sewer alignments known or suspected to have been constructed with an underdrain system;
8. Sanitary sewer infrastructure defects such as leaking service laterals, cracked, broken, or offset sanitary infrastructure, directly piped connections between storm drain and sanitary sewer infrastructure, or other vulnerability factors identified through Inflow/Infiltration Analyses, Sanitary Sewer Evaluation Surveys, or other infrastructure investigations.

9. Areas formerly served by combined sewer systems.

10. Any sanitary sewer and storm drain infrastructure greater than 40 years old in medium and densely developed areas.

11. Widespread code-required septic system upgrades required at property transfers (indicative of inadequate soils, water table separation, or other physical constraints of the area rather than poor owner maintenance).

12. History of multiple local health department or sanitarian actions addressing widespread septic system failures (indicative of inadequate soils, water table separation, or other physical constraints of the area rather than poor owner maintenance).

3.2 Key junction manhole dry weather screening and sampling data

<table>
<thead>
<tr>
<th>Key Junction Manhole ID</th>
<th>Screening / Sample date</th>
<th>Visual/olfactory evidence of illicit discharge</th>
<th>Ammonia</th>

Signature / Date:  
Signature / Date:
Plant native vegetative buffers along streams and drainage pathways

Compost or mulch leaves and yard debris rather than hauling it away

Direct downspouts away from driveways or storm drains, or install rain barrels to collect roof runoff

Maintain septic systems to prevent failure and inspect every 3 years

Sweep up litter and debris from driveways rather than hosing debris into storm drains

Mow your lawn so no more than one third of the length of the grass is removed.

Consider using bricks, flagstone, gravel, and other porous materials instead of pavement or concrete

Clean Water Begins with YOU!

Nutrient Management for a Healthier Lawn and Environment

Town of Monroe, Connecticut
Engineering Department
7 Fan Hill Road
Monroe, CT 06460
What is Stormwater?
Stormwater is water from rain or melting snow that does not soak into the ground. It flows from rooftops, over paved areas, bare soil, and sloped lawns. As it flows, stormwater runoff collects and transports soil, pet waste, salt, pesticides, fertilizers, oil and grease, debris and other potential pollutants.

What is the Problem?
Rain and snowmelt wash pollutants from streets, construction sites, and land into storm sewers and ditches. Eventually, the storm sewers and ditches empty the polluted stormwater directly into streams and rivers with no treatment. This is known as stormwater pollution. Polluted stormwater degrades waterbodies like the Pequonnock River. Nutrients such as phosphorous and nitrogen, which are present in lawn fertilizers, can cause the overgrowth of algae resulting in oxygen depletion in waterways.

Lawn Care Best Management Practices

Cover and contain topsoil and mulch during installation. Wind and rain can transport this material from your yard into nearby lakes and streams, where it reduces aquatic habitat and promotes unwanted weed and algae growth.

Never apply fertilizer before a rainstorm. Heavy rainfall can cause excess fertilizer to flow into the storm sewer system and end up in local lakes and streams. Save time and money by applying a slow-release fertilizer in the early spring and allowing time for gradual soil infiltration. Plant vegetated filter areas or swales to trap pollutants along streets and driveways.

Leave the clippings on the lawn after mowing. This will save time and money and will promote a healthy turf. Grass clippings return organic matter, nitrogen, phosphorus, and other nutrients to your lawn, thereby reducing the need for fertilizer applications throughout the summer. Studies have shown that grass recycling reduces the need for fertilizer by 25%. If the grass gets too high, then mow over the clippings to shred and scatter them. Do not drain swimming pools to storm drains.

Limit your use of pesticides. Inappropriate use of pesticides can harm humans, pets, and the environment. Use alternatives (biological controls) whenever possible to tackle problems with weeds and insects. If pesticides are used, carefully follow the recommended timing, frequency, and application rates found on the container.

Lawn fertilizer: Less is more
Lawnns require nutrients in fertilizer to stay green and healthy. When too much fertilizer is applied, it can wash off during rain events. The nutrients then flow into storm drains, and into watercourses where they become an energy source for algae and aquatic weeds.

Anything applied to the lawn can potentially contaminate surface and ground waters. However, you can minimize the risk posed to our wetlands and watercourses by following these Best Management Practices:

- Save the environment and money! Measure the surface area of your lawn to determine how much product to apply.
- Don’t overload your lawn with nutrients. Apply only in amounts prescribed by the manufacturer. Anything more will damage your lawn and waste your money.
- Use proper spray notification signage and comply with neighbor notification regulations.
- Avoid using chemicals near waterways or storm drains.
- Dispose of unused or excess pesticides in accordance with CTDEEP and US EPA regulations.
- Clean up spills immediately and properly dispose of cleanup materials.
- Avoid spraying in windy conditions or when rain is forecast.

Consider using spreaders equipped with edge guards to provide additional control and avoid casting fertilizers onto paved surfaces.

Reducing turfed areas in favor of native plantings will reduce fertilizer and pesticide demands and improve stormwater quality.
Town to host community services fair

By Monroe Courier on September 26, 2018 in Lead News, News

The town of Monroe invites residents to attend its community services fair at the Edith Wheeler Memorial Library (Ehlers Room), 733 Monroe Turnpike, on Friday, Oct. 5, from 11:30 a.m. to 1:30 p.m.

The event is being organized to provide information about various town services, such as:

- Public health and safety information from fire and health departments;
- Tips on fraud prevention from the police department;
- Parks & Recreation and Community & Social Services programs;
- Voter registration from Monroe’s registrar of voters;
- Absentee ballot information and applications from the town clerk; and
- Information on recycling, bulky waste pickup and household hazardous waste disposal from the Monroe Public Works department.

The Monroe Health Department has also arranged for a local pharmacy to offer annual flu shots. Health Director Nancy Brault encourages residents to obtain a flu shot during their visit.

“Flu vaccines provide annual protection and flu strains change regularly, so it is important to get a new flu shot every year,” said Brault.

Walgreens will be providing vaccine for ages 18 and older. High dose, as well as quadrivalent influenza vaccine will be available while supplies last. No appointments are necessary. Cash, Medicare Part B, and major insurance plans will be accepted. People are asked to bring their insurance card.

“Don’t wait until it’s too late to fight the flu,” said Brault.

Call the Monroe Health Department at (203) 452-2818 for more information.

3/6/2018 - NOTICE OF MS4 STORMWATER ANNUAL REPORT

Public Notice:

Please be advised that The Town of Monroe, as being registered under the Connecticut Department of Energy and Environmental Protection’s (CTDEEP) General Permit for the Discharge of Stormwater from Small Municipal Separate Storm Sewer Systems MS4 (latest five year permit issued in 2017), is required by provisions of the Clean Water Act and registration under the General Permit, to file an annual report of activities undertaken to meet the Minimum Control Measures specified in the Permit and in the Town’s Stormwater Management Plan.

The General Permit requires a 30 day public comment period on the draft plan before it is filed with CTDEEP.

Accordingly, the report can be viewed in the Engineering Department at Town Hall, 7 Fan Hill Road, Monroe, CT., and/or it can be viewed within the Engineering Department or Public Works Department sections/pages of The Town of Monroe website: (http://www.monroect.org/stormwater-pollution-control-resources)

Comments relative to the Annual Report may be directed in writing to:

Scott Schatzlein, PE
Town Engineer
7 Fan Hill RoadMonroe, CT 06468
sschatzlein@monroect.org

General questions can be directed to the Inland Wetlands Department at 203-452-2809

SECTION 1. PURPOSE/INTENT

The purpose of this ordinance is to provide for the health, safety, and general welfare of the citizens of the Town of Monroe (Town) through the regulation of non-stormwater discharges to the storm drainage system to the maximum extent practicable as required by federal and state law. This ordinance establishes methods for controlling the introduction of pollutants into the storm drainage system of the Town which is defined as a Small Municipal Separate Storm Sewer System (MS4) in order to comply with requirements of the National Pollutant Discharge Elimination System (NPDES) permit process. The objectives of this ordinance are:

1) To regulate the contribution of pollutants to the municipal separate storm sewer system (MS4) by storm water discharges by any user.

2) To prohibit Illicit Connections and Illegal Discharges to the municipal separate storm sewer system.

3) To establish legal authority to carry out all inspection, surveillance and monitoring procedures necessary to ensure compliance with this ordinance.

SECTION 2. DEFINITIONS

For the purposes of this ordinance, the following shall mean:

Authorized Enforcement Agency. Town of Monroe (Town), and/or other employees or designees of the Town First Selectman, including the Water Pollution Control Authority, designated to enforce this ordinance.

Best Management Practices (BMPs). Schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to stormwater, receiving waters, or stormwater conveyance systems. BMPs also include treatment practices, operation procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage.

Construction Activity. Activities subject to NPDES Construction Permits. These include construction projects resulting in land disturbance of 1 acre or more. Such activities include but are not limited to clearing and grubbing, grading, excavating, and demolition.

Hazardous Materials. Any material, including any substance, waste, or combination thereof, which because of its quantity, concentration, or physical, chemical, or infectious characteristics
may cause, or significantly contribute to, a substantial present or potential hazard to human health, safety, property, or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

**Illegal Discharge.** Any direct or indirect non-stormwater discharge to the storm drain system, or private storm water discharge directly or indirectly onto/into a Town accepted roadway or right of way (ROW) or any municipal storm drainage system except as exempted in Section 7 of this ordinance.

**Illicit Connections.** An illicit connection is defined as either of the following:

Any drain or conveyance, whether on the surface or subsurface, which allows an illegal discharge to enter the storm drain system including but not limited to any conveyances which allow any non-stormwater discharge including sewage, process wastewater, and wash water to enter the storm drain system and any connections to the storm drain system from indoor drains and sinks, regardless of whether said drain or connection had been previously allowed, permitted, or approved by the Town or;

Any drain or conveyance connected from a commercial or industrial land use to the storm drain system which has not been documented in plans, maps, or equivalent records and approved by the Town or;

Any private site or building drainage pipe outlet discharging directly or indirectly into/onto a Town accepted roadway or ROW surface or;

Any non-permitted private site or building drainage pipe connection having been made to a Town storm drainage system servicing a Town accepted roadway/ROW.

**Industrial Activity.** Activities subject to NPDES Industrial Permits as defined in 40 CFR, Section 122.26 (b)(14).

**National Pollutant Discharge Elimination System (NPDES) Stormwater Discharge Permit.** Means a permit issued by EPA (or by a State under authority delegated pursuant to 33 USC § 1342(b)) that authorizes the discharge of pollutants to water of the United States, whether the permit is applicable on an individual, group, or general area-wide basis.

**Non-Stormwater Discharge.** Any discharge to the storm drain system that is not composed entirely of stormwater.

**Person.** Any individual, association, organization, partnership, firm, corporation or other entity recognized by law and acting as either the owner or as the owner’s agent.
Pollutant. Anything that causes or contributes to pollution. Pollutants may include, but are not limited to: paints, varnishes, and solvents; oil and other automotive fluids; non-hazardous liquid and solid wastes and yard wastes; refuse, rubbish, garbage, litter, or other discarded or abandoned objects, ordinances, and accumulations, so that same may cause or contribute to pollution; floatables; pesticides, herbicides, and fertilizers; hazardous substances and wastes; sewage, fecal coliform and pathogens; dissolved and particulate metals; animal wastes; wastes and residues that result from constructing a building or structure; and noxious or offensive matter of any kind.

Premises. Any building, lot, parcel of land, or portion of land whether improved or unimproved including adjacent sidewalks and parking strips.

Storm Drainage System. Publicly-owned facilities by which stormwater is collected and/or conveyed, including but not limited to any roads with drainage systems, municipal streets, gutter, curbs, inlets, piped storm drains, pumping facilities, retention and detention basins, natural and human-made or altered drainage channels, reservoirs, and other drainage structures.

Stormwater. Any surface flow, runoff, and drainage consisting entirely of water from any form of natural precipitation, and resulting from such precipitation.

Stormwater Pollution Prevention Plan. A document which describes the Best Management Practices and activities to be implemented by a person or business to identify sources of pollution or contamination at a site and the actions to eliminate or reduce pollutant discharges to Stormwater, Stormwater Conveyance Systems, and/or Receiving Waters to the Maximum Extent Practicable.

Stormwater Management Plan, A document designed to reduce the discharge of pollutants from the Small MS4 (the Town) to the maximum extent practicable, to protect water quality, and to satisfy the appropriate water quality requirements of the federal Clean Water Act.

Wastewater. Any water or other liquid, other than uncontaminated stormwater, discharged from a facility.

SECTION 3. APPLICABILITY

This ordinance shall apply to all water entering the municipal storm drainage system generated on any developed and undeveloped lands unless explicitly exempted by the Town.
SECTION 4. RESPONSIBILITY FOR ADMINISTRATION

The Town shall administer, implement, and enforce the provisions of this ordinance. Any powers granted or duties imposed upon the Town may be delegated in writing by the First Selectman to persons or entities acting in the beneficial interest of or in the employ of the Town.

SECTION 5. SEVERABILITY

The provisions of this ordinance are hereby declared to be severable. If any provision, clause, sentence, or paragraph of this Ordinance or the application thereof to any person, establishment, or circumstances shall be held invalid, such invalidity shall not affect the other provisions or application of this Ordinance.

SECTION 6. ULTIMATE RESPONSIBILITY

The standards set forth herein and promulgated pursuant to this ordinance are minimum standards; therefore this ordinance does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, nor unauthorized discharge of pollutants.

SECTION 7. DISCHARGE PROHIBITIONS

Prohibition of Illegal Discharges

No person shall discharge or cause to be discharged into the municipal storm drainage system, wetlands, or watercourses any materials, including but not limited to pollutants or waters containing any pollutants that cause or contribute to a violation of applicable water quality standards, other than stormwater.

The commencement, conduct or continuance of any illegal discharge to the storm drainage system is prohibited except as described as follows:

1. The following discharges are exempt from discharge prohibitions established by this ordinance providing they contain no pollutants: water line flushing, landscape irrigation or lawn watering, diverted stream flows, rising ground water, ground water infiltration to storm drains, uncontaminated pumped ground water, foundation or footing drains (not including active groundwater dewatering systems), crawl space pumps, air conditioning condensation, springs, non-commercial washing of vehicles, natural riparian habitat or wetland flows, swimming pools (if de-chlorinated / typically less than one part per million chlorine) firefighting (non-training) activities, and any other water source not containing Pollutants. Allowance of these discharges under this ordinance
does not relieve the person initiating such discharge/s from obtaining other environmental permits that may be required under Federal, State, or Local law.

2. Discharges specified in writing by the Town as being necessary to protect public health and safety.

3. Dye testing is an allowable discharge, but requires a verbal notification to the Town prior to the time of the test.

4. The prohibition shall not apply to any non-stormwater discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the Federal Environmental Protection Agency or the Connecticut Department of Energy and Environmental Protection (DEEP), provided that the discharger is in full compliance with all requirements of the permit, waiver, or order and other applicable laws and regulations, and provided that written approval has been granted for any discharge to the storm drain system.

Prohibition of Illicit Connections

1. The construction, use maintenance or continued existence of illicit connections to the storm drain system is prohibited.

2. This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.

3. A person is considered to be in violation of this ordinance if the person connects a line conveying sewage to the MS4, or allows such a connection to continue.

SECTION 8. SUSPENSION OF MS4 ACCESS

Suspension due to Illicit Discharges in Emergency Situations

The Town may, without prior notice, suspend MS4 discharge access to a person when such suspension is necessary to stop an actual or threatened discharge which presents or may present imminent and substantial danger to the environment, or to the health or welfare of persons, or to the MS4 or Waters of the United States. If the violator fails to comply with a suspension order issued in an emergency, the Town may take such steps as deemed necessary to prevent or minimize damage to the MS4 or Water of United States, or to minimize danger to persons.
Suspension due to the Detection of Illicit Discharge

Any person discharging to the MS4 in violation of this ordinance may have their MS4 access terminated if such termination would abate or reduce an illicit discharge. The Town will notify a violator of the proposed termination of its MS4 access. The violator may petition the Town for a reconsideration and hearing within fifteen (15) days of the receipt of said notice of termination.

A person commits an offense if the person reinstates MS4 access to any premises terminated pursuant to this Section, without the prior approval of the Town.

SECTION 9. INDUSTRIAL, COMMERCIAL OR CONSTRUCTION ACTIVITY DISCHARGES

Any person subject to an industrial, commercial or construction activity NPDES stormwater discharge permit shall comply with all provisions of such permit. Proof of compliance with said permit may be required in a form acceptable to the Town prior to the allowing of discharges to the MS4.

SECTION 10. MONITORING OF DISCHARGES

1. Applicability

   This section applies to all facilities that have stormwater discharges associated with industrial, commercial or construction activity.

2. Access to Facilities

   (1) The Town shall be permitted to enter and inspect facilities subject to regulation under this ordinance as often as may be necessary to determine compliance with this ordinance. If a discharger has security measures in force that require proper identification and clearance before entry into its premises, the discharger shall make the necessary arrangements to allow access to representatives of the Town.

   (2) Facility operators shall allow the Town ready access to all parts of the premises for the purposes of inspection, sampling, examination and copying of records that must be kept under the conditions of an NPDES permit to discharge stormwater, and the performance of any additional duties as defined by state and federal law.
(3) The Town shall have the right to set up on any permitted facility such devices as are necessary in the opinion of the Town to conduct monitoring and/or sampling of the facility’s stormwater discharge.

(4) The Town has the right to require the discharger to install monitoring equipment as necessary. The facility’s sampling and monitoring equipment shall be maintained at all times in a safe and proper operating condition by the discharger at its own expense. All devices used to measure stormwater flow and quality shall be calibrated to ensure their accuracy.

(5) Any temporary or permanent obstruction to safe and easy access to the facility to be inspected and/or sampled shall be promptly removed by the operator at the written or oral request of the Town and shall not be replaced. The costs of clearing such access shall be borne by the operator.

(6) Unreasonable delays in allowing the Town access to a permitted facility is a violation of a stormwater discharge permit and of this ordinance. A person who is the operator of a facility with a NPDES permit to discharge stormwater associated with industrial, commercial or construction activity commits an offense if the person denies the Town reasonable access to the permitted facility for the purpose of conducting any activity authorized or required by this ordinance.

(7) If the Town has been refused access to any part of the premises from which stormwater is discharged, and he/she is able to demonstrate probable cause to believe that there may be a violation of this ordinance, or that there is a need to inspect and/or sample as part of a routine inspection and sampling program designed to verify compliance with this ordinance or any order issued hereunder, or to protect the overall public health, safety, and welfare of the community, then the Town may seek issuance of a search warrant from any court of competent jurisdiction.

SECTION 11. REQUIREMENT TO PREVENT, CONTROL, AND REDUCE STORMWATER POLLUTANTS BY THE USE OF BEST MANAGEMENT PRACTICES

The Town may adopt requirements identifying Best Management Practices (BMPs) for any activity, operation, or facility that may cause or contribute to pollution or contamination of stormwater, the storm drainage system, or waters of the state. The owner or operator of a commercial or industrial establishment shall provide, at their own expense, reasonable protection from accidental discharge of prohibited materials or other wastes into the municipal storm drainage system, wetlands or watercourses through the use of these structural and non-structural BMPs. Further, any person responsible for a property or premise, which is, or may
be, the source of an illicit discharge, may be required to implement, at said person's expense, additional structural and non-structural BMPs to prevent the further discharge of pollutants to the municipal separate storm sewer system. Compliance with all terms and conditions of a valid NPDES permit authorizing the discharge of stormwater associated with industrial or commercial activity, to the extent practicable, shall be considered to comply with the provisions of this section. These BMPs shall be part of a stormwater pollution prevention plan (SWPPP) or stormwater management plan (SMP) as necessary for compliance with requirements of the National Pollutant Discharge Elimination System NPDES permit.

SECTION 12. WATERCOURSE PROTECTION

Every person owning property through which a watercourse passes, in whole or in part, or such person's lessee, shall keep and maintain that part of the watercourse within the property free of trash, debris, excessive vegetation, and other obstacles that would pollute, contaminate, or significantly retard the flow of water through the watercourse. In addition, the owner or lessee shall maintain existing privately owned structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

SECTION 13. NOTIFICATION OF SPILLS

Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into stormwater, the storm drainage system, or waters of the United States, said person shall take all necessary steps to ensure the discovery, containment, and cleanup of such release. In the event of such a release of hazardous materials said person shall immediately notify emergency response agencies of the occurrence via emergency dispatch services. In the event of a release of non-hazardous materials, said person shall notify the Town in person or by phone or facsimile no later than the next business day. Notifications in person or by phone shall be confirmed by written notice addressed and mailed to the Town of Monroe, 7 Fan Hill Road Monroe, CT 06468 within three (3) business days of the phone notice. If the discharge of prohibited materials emanates from a commercial or industrial establishment, the owner or operator of such establishment shall also retain an on-site written record of the discharge and the actions taken to prevent its recurrence. Such records shall be retained for at least three years.
SECTION 14. ENFORCEMENT

1. Notice of Violation

Whenever the Town finds that a person has violated a prohibition or failed to meet a requirement of this Ordinance, the Town may order compliance by written notice of violation to the responsible person. Such notice may require without limitation:

a) The performance of monitoring, analyses, and reporting;

b) The elimination of illicit connections or discharges;

c) That violating discharges, practices, or operations shall cease and desist;

d) The abatement or remediation of stormwater pollution or contamination hazards and the restoration of an affected property; and

e) Payment of a fine to cover administrative and remediation costs; and

f) The implementation of source control or treatment BMPs.

If abatement of a violation and/or restoration of affected property are required, the notice shall set forth a deadline within which such remediation or restoration must be completed. Said notice shall further advise that, should the violator fail to remediate or restore with the established deadline, the work may be done by the Town or a contractor, and the expense thereof shall be charged to the violator.

SECTION 15. APPEAL OF NOTICE OF VIOLATION

a) Any person receiving a Notice of Violation may appeal the determination of the Town.

b) A written notice of appeal must be received within fifteen (15) days from the date of the Notice of Violation. Such notice shall inform the person cited: (1) Of the allegations against him or her and the amount of the fines, penalties, costs or fees due; (2) that he or she may contest his or her liability before a citation hearing officer by delivering in person or by mail written notice within fifteen days of the date thereof; (3) that if he or she does not demand such a hearing, an assessment and judgment shall be entered against him or her; and (4) that such judgment may issue without further notice.

For purposes of this section, notice shall be presumed to have been properly sent if such notice was mailed to such person’s last-known address on file with the tax collector. If the person to whom such notice is issued is a registrant, the municipality may deliver
such notice in accordance with section 7-148ii, provided nothing in this section shall preclude a municipality from providing notice in another manner permitted by applicable law.

c) Filing of a request for appeal shall stay the action by the Town. If a request for appeal is not made within the fifteen-calendar day period, the action of the Town is final.

d) If the person who is sent notice pursuant to subsection (b) of this section wishes to admit liability for any alleged violation, he or she may, without requesting a hearing, pay the full amount of the fines, penalties, costs or fees admitted to in person or by mail to an official designated by the First Selectman. Such payment shall be inadmissible in any proceeding, civil or criminal, to establish the conduct of such person or other person making the payment. Any person who does not deliver or mail written demand for a hearing within fifteen (15) days of the date of the first notice provided for in subsection (b) of this section shall be deemed to have admitted liability, and the designated municipal official shall certify such person’s failure to respond to the hearing officer. The hearing officer shall thereupon enter and assess the fines, penalties, costs or fees provided for by the applicable ordinances and shall follow the procedures set forth in subsection (f) of this section.

e) Any person who requests a hearing shall be given written notice of the date, time and place for the hearing. A Hearing on the appeal before a hearing officer, appointed by the First Selectman shall take place within thirty (30) days from the date of receipt of the notice of appeal, provided that the hearing officer shall grant upon good cause shown any reasonable request by any interested party for postponement or continuance.

If such person fails to appear, the hearing officer may enter an assessment by default against him upon a finding of proper notice and liability under the applicable statutes or ordinances. The person requesting the hearing may testify concerning the facts, circumstances and nature of his/her appeal and may present supporting documentation. The hearing officer may accept from such person copies of police reports, investigatory and citation reports, and other official documents by mail and may determine thereby that the appearance of such person is unnecessary. The hearing officer shall conduct the hearing in the order and form and with such methods of proof as he deems fair and appropriate, but shall be informal in nature. The rules regarding the admissibility of evidence shall not be strictly applied, but all testimony shall be given under oath or affirmation.
The hearing officer shall announce his or her decision at the end of the hearing. If he or she determines that the person is not liable, he or she shall dismiss the matter and enter his or her determination in writing accordingly. If he or she determines that the person is liable for the violation, he or she shall forthwith enter and assess the fines, penalties, costs or fees against such person as provided by the applicable ordinances of the municipality.

f) The decision of the hearing officer shall be final.

g) If such assessment is not paid on the date of its entry, the hearing officer shall send by first class mail a notice of the assessment to the person found liable and shall file, not less than thirty days or more than twelve months after such mailing, a certified copy of the notice of assessment with the clerk of a superior court together with the entry fee.

h) A person against whom an assessment has been entered pursuant to this section is entitled to judicial review by way of appeal in accordance with Conn. Gen. Stat. § 7-152c (g). An appeal shall be instituted within thirty (30) days of the mailing of notice of such assessment by filing a petition to reopen assessment, together with the court entry fee.

SECTION 16. ENFORCEMENT MEASURES AFTER APPEAL

If the violation has not been corrected pursuant to the requirements set forth in the Notice of Violation, or, in the event of an appeal, within fifteen (15) days of the decision of the municipal authority upholding the decision of the Town, then representatives of the Town may enter upon the subject private property and are authorized, if needed to take any and all measures necessary to abate the violation and/or stabilize the property. It shall be unlawful for any person, owner, agent or person in possession of any premises to refuse to allow the Town or designated contractor to enter upon the premises for the purposes set forth above.

SECTION 17. COST OF ABATEMENT OF THE VIOLATION

Within a minimum of thirty (30) days after abatement of the violation, the owner of the property will be notified of the cost of abatement, including administrative costs. The property owner may file a written protest objecting to the amount of the assessment within fifteen (15) days. If the amount due is not paid within a timely manner as determined by the decision of the municipal authority or by the expiration of the time in which to file an appeal, the charges shall become a special assessment against the property and shall constitute a lien on the property for the amount of the assessment.

Any person violating any of the provisions of this article shall become a liable to the Town by reason of such violation. The liability shall be paid in not more than twelve (12) equal
payments. Interest at the rate of ten (10%) percent per annum shall be assessed on the balance beginning on the first day following discovery of the violation.

SECTION 18. INJUNCTIVE RELIEF

It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this Ordinance. If a person has violated or continues to violate the provisions of this ordinance, the Town may petition for a preliminary or permanent injunction restraining the person from activities which would create further violations or compelling the person to perform abatement or remediation of the violation.

SECTION 19. COMPENSATORY ACTION

In lieu of enforcement proceedings, penalties, and remedies authorized by this Ordinance, the Town may impose upon violator alternative compensatory actions, such as storm drain stenciling, attendance at compliance workshops, cleanup, etc.

SECTION 20. VIOLATIONS DEEMED A PUBLIC NUISANCE

In addition to the enforcement processes and penalties provided, any condition caused or permitted to exist in violation of any of the provisions of this Ordinance is a threat to public health, safety, and welfare, and is declared and deemed a nuisance, and may be summarily abated or restored at the violator’s expense, and/or a civil action to abate, enjoin, or otherwise compel the cessation of such nuisance may be taken.

SECTION 21. CRIMINAL PROSECUTION

Any person that has a violated or continues to violate this ordinance shall be liable to criminal prosecution to the fullest extent of the law, and shall be subject to a criminal penalty of one hundred and fifty ($150.00) dollars per violation per day and/or imprisonment.

The Town may recover all attorneys’ fees court costs and other expenses associated with enforcement of this ordinance, including sampling and monitoring expenses.

SECTION 22. REMEDIES NOT EXCLUSIVE

The remedies listed in this ordinance are not exclusive of any other remedies available under any applicable federal, state or local law and it is within the discretion of the Town to seek cumulative remedies.
SECTION 23. ADOPTION OF ORDINANCE

This ordinance shall be in full force and effect fifteen (15) days after its final passage and adoption. All prior ordinances and parts of ordinances in conflict with this ordinance are hereby repealed.

Adopted by Town Council on September 12, 2018

[Signature]

Kenneth M. Kellogg, First Selectman
Endorsed for approval on September 14, 2018

Ordinance effective date: October 20, 2018
Establish the erosion controls (construction entrance & silt fencing) per the approved plan by Tuesday 7/17/2018. The erosion controls were have been installed PRIOR to the start of construction. Sweep the tracking from the roadway ASAP.

Also, it is advised to have the limit of conservation easement/proposed stonewall to be clearly marked as well as to not encroach past this limit. Disturbances past this limit will result in a violation and restoration efforts.

Attached are inspection photos from 7/11/2018 as well as scans of the approved plan set.

GENERAL NOTES

1. Deviation from this plan shall be reviewed by a professional engineer to additional regulatory approvals.

2. Land disturbance will be kept to a minimum. Re-stabilization will be as practicable.

3. All erosion and sediment control measures will be constructed in accordance with standards and specifications of the 2002 Connecticut Guidelines for Sediment Control.

4. Erosion and sediment control measures will be installed prior to construction and will be maintained in effective condition throughout the construction period.

5. The owner is assigned the responsibility for implementing this erosion control plan. This responsibility includes the installation and maintenance of measures, informing all parties engaged on the construction site the objectives of the plan, notifying the Land Use Agency of any transfers and for conveying a copy of the erosion & sediment control plan to the new owners.

Chris,

Please provide silt fencing on the down gradient limit of disturbance. Also add the erosion controls around the depressed catch basin as stated in an earlier email. A re-inspection of the erosion controls will be made by this Friday 1/26 if they haven’t been installed sooner.

As discussed previously, provide the foundation as-built plan which should have been submitted prior to the start of framing.

Matt & Chris,

Please submit the $2,000 C.O. Bond for site stabilization. Please provide better stabilization measures (i.e. silt fence back by hay bales) around the yard drain as this area is consistently being silted over. Also clean out the yard drain to prevent sediment from entering the roadway storm drainage system. See the attached pictures from 9/7/2018.

Chris,

Are there any updates to this property (38 Birdseye Road), as well at 8 Birdseye Road & 83 Trailside Drive (model home)?
Scott,
I want to review this with you before pushing out the email...

Lester,
After an inspection of the site with the submitted as-built plan, the following is the list of items in need of correction, cause for concern, or needs more clarification:

- Wall height is over 5' tall???
- Replace the bit. conc. curbing along the cul-de-sac.
- The driveway visually appears to be of uniform slope but the as-built shows it having variable grade and greater than 10% slope in one area which is too steep.
- Stabilize the slope on the Southern side of the driveway to prevent continued erosion.
- Provide splash pads at both drainage outlets (Recharge system outlet in the rain garden which I couldn't find and foundation drain outlet in the woods).
- Remove all debris from the wooded area such as old TV, concrete, slate, wire mesh, etc.
- Install the IW Marker Posts per the detail with the rebar to ensure the posts are not easily removable.
- Revise as-built to reflect: wall elevations, underground propane tank location, label foundation drain outlet, roof drain wraps around the back of the garage and twin pipes enter the distribution box.
- In addition to the six (6) black & white traditional as-built plans, the IWC approval requires an overlay of the approval drawing for comparison purposes.

Jay, John, Christian,

An inspection performed today (see attached photos) verified that the silt sacks in the access way have been restored and/or cleaned, and the silt fence/hay bale limits have been restored. The limits of the single row of silt fencing has been started but not trenched and backfilled as of yet. The site crew expressed that this stretch will be properly installed soon. A follow up inspection at the end of next week will be conducted for this remaining part.

Your efforts to comply with the approval and protect the wetland areas is much appreciated.

Fernando,

Please go through your site and make sure all the erosion control measures are in place and functioning as designed.

Also, please address the sediment that is making its way out the front driveway entrance, down the new sidewalk, and onto the adjacent property at 456 Main Street (Hill 'N Dale).

Gentlemen,

A quick re-inspection (see attached photos) reveals that the tracking is still occurring, but I have been told that the construction entrances have been re-done, the loader scraps the street at the each day, and a sweeper comes every Friday. Perhaps better communication with your contractors that are using the skid steers and lulls that are doing the bulk of the tracking need to be educated. This education would lessen the emails being generated and reduce your clean-up costs (win/win).

Also, it appears the curtain drain along the North cul-de-sac of Birdseye Road is not working 100%. Please make every effort possible to remediate this as colder temperatures are here and this will turn into an icing condition. This condition will ultimately need to be resolved prior to the final pavement being laid down come Spring/Summer.

Subject: 1312 Monroe Turnpike - Birdseye Estates - Erosion Control

Gentlemen,

We've gone over this time and time again! There must be properly maintained construction entrances to all active building sites as well as inlet protection at all catch basins and silt fencing at limits of disturbance. Every time we come up for inspections there is always heavy mud tracking in the roadways, destroyed silt fencing, sediment build up by the catch basins, etc. With the expected heavy rains tonight, please sweep the roadway at the end of the day. And implement or reconstruct construction entrances at all curb cuts in the days that follow.

Harold,

The person that emailed below (& see attachments) came in yesterday afternoon to have questions answered about the sediment laden storm water coming off Fireman’s Field. His concerns of lack of erosion controls (silt fencing and/or hay bales) in the area of the stockpiles is the creating this condition along Moose Hill Road.

Can you please address this until all disturbed areas are stabilized? Thanks!

Subject: CTDOT Sediment issues

Conrad,

Please find the attached photos related to the lack of sediment controls by CTDOTs contractor. In the contract what are the BMPs related to soil erosion and sediment controls. We as the Town of Monroe need to make certain that the mess created by the contractor is remediated prior to completion of this project. All streams, tributaries and basins in the area of this project should be evaluated by CTDOTs Consultants and a final inspection report should be given to the town for filling. Catch basins should be vacuumed out and all below grade piping for all stormwater systems should be inspected by a pipe camera to assure no sediment remains in systems. Possible pipe jetting my be warranted after what I witnessed.
Bruce,

Please address the temporary sediment basin that has silted in and re-grade the area to make sure all of the sheet flow gets to the re-formed sediment basin. Also re-establish all of the silt fencing that has deteriorated, gone missing, or not working as designed. I will re-inspect in one weeks time (9/27).

All,

See the below email and attached photos from Joe @ Aquarion (Manager – Environmental Protection). With the brief but heavy rain storms we have been getting lately, it is imperative that the top soiled bank be stabilized. As you'll see in the photos, the silt fence alone does not filter the stormwater enough. Please make your best effort to repair all eroded areas and stabilize all disturbed areas ASAP.

With the threat of yet another heavy thunderstorm this afternoon, it would be beneficial to enhance the erosion controls in some capacity.

Hi Scott,

Would you be able to have the developer do a better job stabilizing the site at 500 Pepper Street. Yesterday I observed significant runoff from the site due to a silt fence failure. Attached are pictures of the site and release into the wetland which made its way into the West Pequonnock.
They should seed and hay the site as soon as possible and some added hay bales might help too along the silt fence that failed.

Thanks,
All,

Establish the erosion controls (construction entrance & silt fencing) per the approved plan by Tuesday 7/17/2018. The erosion controls were have been installed PRIOR to the start of construction. Sweep the tracking from the roadway ASAP.

Attached are inspection photos from 7/11/2018 as well as scans of the approved plan set.
